

HACK VS 2026 • SINERGY CHALLENGE

NITROGEN BROTHERS

From Martigny's wastewater to a Valais fertiliser

THE PROBLEM

Martigny destroys nitrogen it could sell

≈ 30 t

of nitrogen a year in the digestion water,
destroyed today at a cost

IT ALREADY WORKS

Yverdon does it since 2016

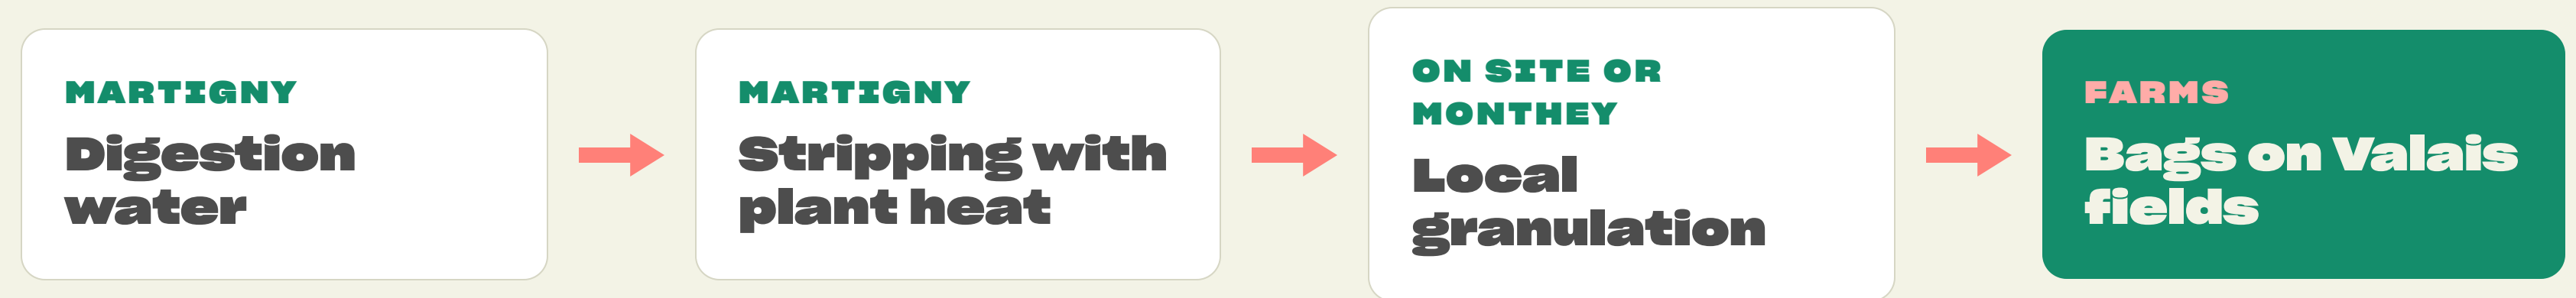

2016

Yverdon recovers its nitrogen and sells an approved fertiliser

OUR SOLUTION

Catch the nitrogen, make granules

Almost nothing wasted.

THE PRODUCT

A solid fertiliser, as farmers asked

142 t

of granules a year · 21 % N · 24 % S

5,700

bags of 25 kg

THE MARKET

Right next door

≈ 2,300 ha

of orchards and vines in the Martigny district

1.8 to 2.2

CHF per kg N, below market price

WHAT IT COSTS

The price of a coffee a year

CHF 3 to 5

per inhabitant a year, built into Step 2050

Money the new water law will ask anyway. It buys a fertiliser instead of destroying the nitrogen.

OUR RECOMMENDATION

GO, with three conditions

1 • Buyers signed

2 • Local granulation: own unit or a partner nearby

3 • Step 2050 on board from day one

CONCLUSION

**Martigny will pay for
its nitrogen anyway.
Let it buy a Valais
fertiliser.**
